double encore Quick Coding Test

Write a simple app to display data about books for sale on eBay. Fetch the data from this URL:

http://de-coding-test.s3.amazonaws.com/books.json

- Once you set up your environment we ask that you spend around two hours to complete and submit your project.
- You can use external libraries but we ask that you try to limit the use of them as much as possible. (Our developers would look at 1-2 for this project)
- You may submit your project before two hours have elapsed, but please remember that we're focused on quality and not on speed.
- You may only submit your project once. Resubmissions will not be accepted.
- If you are not completely finished after the two hours have elapsed, submit your unfinished project, as we would like to review.

Once you've submitted your project, send us a separate follow-up email with a brief summary detailing any modifications or additions you would make to your code if you were given more time to develop.

We're looking for submissions that:
- Display ALL of the data in the list we've provided, including the thumbnail images.
- Fetch the data over the network, and don't simply bundle it into the app.
- Feature clean and consistent code.
- Demonstrate a solid understanding of the Android Platform.
